

A photograph of two women hiking on a dirt path along a steep, green cliffside. The woman on the left is wearing a light blue jacket and glasses, smiling at the camera. The woman on the right is wearing a dark blue jacket and is looking towards the left, also smiling. In the background, a deep blue ocean stretches to the horizon under a clear blue sky with a few wispy clouds. The cliffside is covered in lush green vegetation.

Pillar 3 intro

Notes to the reader

Annual reporting

Each year, we publish our annual reporting suite, which brings together key disclosures on our performance and other relevant topics. The Annual Report serves as our primary statutory and regulatory disclosure, complemented by our Pillar 3 Report. While these reports are published as part of the same suite, each has its own distinct purpose and should be read separately.

The Pillar 3 Report, approved by bunq's management board, focuses on capital adequacy and risk management. It presents bunq's main financial ratios and provides insight into our capital position, the size and composition of our capital base, and the relationship between capital and risk, as reflected in risk-weighted assets. The information included in the Annual Report and the information in this report are consistent and partially overlap.

The Pillar 3 report allows us to be transparent and comply with the reporting requirements from the European Capital Requirements Regulation (CRR). It provides information on all the topics mentioned in the Regulation to the extent that they apply to bunq.

Presentation of information

The Pillar 3 report has been prepared in thousands of euros (EUR) unless stated otherwise. The euro is the functional and reporting currency of bunq. Small differences to figures in the Financial Statements may occur due to rounding. Numbers presented throughout this document may not precisely add up to the totals due to rounding in some cases.

The disclosures have been subject to bunq's internal controls and validation mechanisms, to provide assurance over the information disclosed in this report as well as with regards to compliance with laws and regulations. The information in the Pillar 3 report has not been audited or reviewed by bunq's external auditor.

Tables out of scope for bunq B.V.

In accordance with Article 432 of the CRR, bunq may omit one or more of the required disclosures where the information provided by those disclosures is not regarded as material or is not applicable to its operations. Information in disclosures is regarded as material where its omission or misstatement could change or influence the assessment or decision of a user of that information relying on it for the purpose of making economic decisions.

In accordance with Article 432 of the CRR, bunq will explain the reasons for omitting any information required in the templates and tables.

The following templates have been identified as not applicable to bunq and are therefore not included in this report:

Table	Description	Reason for exclusion
EU KM2	Key metrics - MREL and, where applicable, G-SII requirement for own funds and eligible liabilities	bunq is not a resolution entity.
EU CMS1	Comparison of modelled and standardised risk weighted exposure amounts at risk level	bunq does not apply the internal Rating-Based approach (IRB).
EU CMS2	Comparison of modelled and standardised risk weighted exposure amounts for credit risk at asset class level	bunq does not apply the internal Rating-Based approach (IRB).
EU CVA4	RWA flow statements of credit valuation adjustment risk under the Standardised Approach	bunq does not use the Standardised Approach to calculate Credit valuation adjustment risk.
EU REM3	Deferred remuneration	bunq does not have deferred remuneration under the scope of this disclosure.
EU REM4	Remuneration of 1 million EUR or more per year	bunq does not have staff that have been remunerated EUR 1 million or more per financial year.
EU TLAC1	Composition - MREL and, where applicable, G-SII requirement for own funds and eligible liabilities	bunq is not a resolution entity.
EU TLAC3b	Creditor ranking - resolution entity OR EU TLAC3a - creditor ranking - resolution entity	bunq is not a resolution entity.

EU OVC - ICAAP information

Our approach to assessing internal capital adequacy is grounded in a comprehensive, forward-looking financial forecast. We establish a three-year base case that integrates key business drivers, including strategic growth targets, operational and hiring needs, and the evolution of our investment pipelines. The capital requirement for this baseline scenario is determined in accordance with the most recent Supervisory Review and Evaluation Process (SREP) decision, ensuring our foundational plan is aligned with regulatory expectations.

Building on this forecast, we conduct a rigorous stress-testing process to ensure our resilience against material risks. Three distinct stress scenarios are developed—idiosyncratic, market-wide, and combined—which are complemented by a macroeconomic scenario provided biannually by the European Banking Authority (EBA). By quantifying the potential capital depletion under each of these scenarios, we determine the appropriate level of Pillar 2 guidance needed to maintain financial stability. A reverse stress test is also performed to identify the magnitude of stresses that would cause a breach of our binding capital requirements, and to assess the likelihood of such events materializing. This multi-layered methodology ensures our internal capital is not only adequate for our strategic ambitions but also robust enough to withstand significant and varied shocks.

On an annual basis, the results of this Internal Capital Adequacy Assessment Process (ICAAP) are submitted to De Nederlandsche Bank (DNB), along with supporting documentation, as part of the Supervisory Review and Evaluation Process (SREP).

Disclosure of risk management objectives and policies

EU OVA - Institution risk management approach

Risk Management framework

The Group's managing board has overall responsibility for the establishment and oversight of the Group's risk management framework. The managing board has established that bunq use a Three lines of defense model:

- First line – Business Operations, whose main responsibility is to carry out activities aimed at achieving bunq's business objectives;
- Second line – Risk and Compliance, whose main responsibilities are: maintaining a comprehensive understanding of the risk that bunq faces and alerting management in case of changes to the risk profile or the environment in which it operates; challenging the activities, processes, and controls in the First line;
- Third line – System Checker, or the internal audit, which provides an independent and objective perspective on the design and effectiveness of internal systems that are aimed at achieving the business objectives.

The managing board steers bunq's risk management approach by approving risk management policies at the Group level.

The purposes of the Group's risk management policies is to identify and analyze the risks faced by the Group, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. The Group has specified its risk limits and articulated its appetite for risk taking in a Risk Appetite Statement, which is reviewed and updated frequently and approved by the Managing and Supervisory Board.

The risk management policies and systems are reviewed regularly to reflect changes in market conditions and the Group's activities. The Group, through its training and management standards and procedures, aims to develop a disciplined and constructive control environment in which all employees understand their roles and obligations.

The Group's Risk Committee oversees how management monitors compliance with the Group's risk management policies and procedures and reviews the adequacy of the risk management framework in relation to the risks faced by the Group. The committee regularly monitors subsidiaries based outside of the Netherlands to ensure compliance with risk policies and to ensure sufficient safeguards are in place in Group subsidiaries.

The Risk Committee complements the oversight role of the Supervisory Board with insights obtained by the System Checker (Internal Audit). bunq's System Checker serves as our robust third line of defense. The internal team evaluates the sufficiency and efficiency of our governance, risk management, and control systems. The System Checker ensures thorough evaluations, fostering continuous improvement. Their findings are transparently

bunq B.V. Group is exposed to the following risks:

communicated to both management and the governing body, in alignment with our System Checker Charter. The Audit Plan is defined yearly on a risk-based approach and submitted to management and governing body approval. Next to that, regular penetration tests and reviews are performed of the Group's IT and network infrastructure, as well as the systems and the app, by a specialized white hacker agency.

Overview of risk categories

Risk categories	Sub categories	Defined as:
Financial risk	Credit risk	Risk of potential loss due to default by the Group's debtors or trading counterparties
	Financial stability risk	The risk that the Group cannot meet minimum capital requirements or financial liabilities when they become due at a reasonable cost and in a timely manner
	Market risk	The risk of potential loss due to adverse movements in market variables
Non-financial risk	Compliance risk	A threat posed to the Group's standing resulting from a failure to act in line with applicable laws and regulations, internal rules and/or societal expectations
	Legal risk	The risk of loss resulting from disputes for or against the company, failure to correctly document, enforce or adhere to contractual arrangements, inadequate management of non-contractual rights. We consider separately this operational risk due to its specific nature
	Operational risk	The risk of direct or indirect loss arising from inadequate or failed internal processes, people and systems or from external events
Overarching risks	Business and strategic risk	The value or earnings loss due to business and strategic decisions that do not materialize as planned. This risk can be expressed in terms of volumes, margins, expenses and fees and commissions
	Conduct risk	The risk of failing to meet appropriate standards of consumer protection
Transversal risks	Climate risk	The risk of losses arising from any negative financial impact on the institution stemming from the current or prospective impacts of environmental, social or governance factors on the institution's counterparties or invested assets

Full details on bunq's Risk Management approach is described within our Annual Report. This Annual Report is available through our website.

EU OVB - Disclosure on governance arrangements

Information on governance arrangements, including the number of directorships held by members of the management body, the recruitment policy for the selection of members of the management body and information about diversity, is described in the Governance chapter of our Annual Report. This Annual Report is available through our website.

Own funds, leverage & liquidity

EU CC1 - Composition of regulatory own funds

		(a)	(b)
		Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
	Common Equity Tier 1 (CET1) capital: instruments and reserves		
1	Capital instruments and the related share premium accounts	260,043	CC2-20
	of which: Instrument type 1	260,043	CC2-20
	of which: Instrument type 2	-	
	of which: Instrument type 3	-	
2	Retained earnings	26,482	CC2-21
3	Accumulated other comprehensive income (and other reserves)	104,510	CC2-24 & CC2-25
EU-3a	Funds for general banking risk	-	
4	Amount of qualifying items referred to in Article 484 (3) CRR and the related share premium accounts subject to phase out from CET1	-	
5	Minority interests (amount allowed in consolidated CET1)	24,482	CC2-23
EU-5a	Independently reviewed interim profits net of any foreseeable charge or dividend	16,780	CC2-22
6	Common Equity Tier 1 (CET1) capital before regulatory adjustments	432,296	
	Common Equity Tier 1 (CET1) capital: regulatory adjustments		
7	Additional value adjustments (negative amount)	(30)	
8	Intangible assets (net of related tax liability) (negative amount)	(46,133)	CC2-10
9	Not applicable	-	
10	Deferred tax assets that rely on future profitability excluding those arising from temporary differences (net of related tax liability where the conditions in Article 38 (3) CRR are met) (negative amount)	-	
11	Fair value reserves related to gains or losses on cash flow hedges of financial instruments that are not valued at fair value	-	
12	Negative amounts resulting from the calculation of expected loss amounts	-	
13	Any increase in equity that results from securitised assets (negative amount)	-	
14	Gains or losses on liabilities valued at fair value resulting from changes in own credit standing	-	
15	Defined-benefit pension fund assets (negative amount)	-	
16	Direct, indirect and synthetic holdings by an institution of own CET1 instruments (negative amount)	-	
17	Direct, indirect and synthetic holdings of the CET1 instruments of financial sector entities where those entities have reciprocal cross holdings with the institution designed to inflate artificially the own funds of the institution (negative amount)	-	

		(a)	(b)
		Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
18	Direct, indirect and synthetic holdings by the institution of the CET1 instruments of financial sector entities where the institution does not have a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)	-	
19	Direct, indirect and synthetic holdings by the institution of the CET1 instruments of financial sector entities where the institution has a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)	-	
20	Not applicable	-	
EU-20a	Exposure amount of the following items which qualify for a RW of 1250%, where the institution opts for the deduction alternative	-	
EU-20b	of which: qualifying holdings outside the financial sector (negative amount)	-	
EU-20c	of which: securitisation positions (negative amount)	-	
EU-20d	of which: free deliveries (negative amount)	-	
21	Deferred tax assets arising from temporary differences (amount above 10% threshold, net of related tax liability where the conditions in Article 38 (3) CRR are met) (negative amount)	-	
22	Amount exceeding the 17,65% threshold (negative amount)	-	
23	of which: direct, indirect and synthetic holdings by the institution of the CET1 instruments of financial sector entities where the institution has a significant investment in those entities	-	
24	Not applicable	-	
25	of which: deferred tax assets arising from temporary differences	-	
EU-25a	Losses for the current financial year (negative amount)	-	
EU-25b	Foreseeable tax charges relating to CET1 items except where the institution suitably adjusts the amount of CET1 items insofar as such tax charges reduce the amount up to which those items may be used to cover risks or losses (negative amount)	-	
26	Not applicable	-	
27	Qualifying AT1 deductions that exceed the AT1 items of the institution (negative amount)	-	
27a	Other regulatory adjustments	(1,614)	
28	Total regulatory adjustments to Common Equity Tier 1 (CET1)	(47,777)	
29	Common Equity Tier 1 (CET1) capital	384,519	
	Additional Tier 1 (AT1) capital: instruments		
30	Capital instruments and the related share premium accounts		
31	of which: classified as equity under applicable accounting standards		
32	of which: classified as liabilities under applicable accounting standards		

		(a)	(b)
		Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
33	Amount of qualifying items referred to in Article 484 (4) CRR and the related share premium accounts subject to phase out from AT1		
EU-33a	Amount of qualifying items referred to in Article 494a(1) CRR subject to phase out from AT1		
EU-33b	Amount of qualifying items referred to in Article 494b(1) CRR subject to phase out from AT1		
34	Qualifying Tier 1 capital included in consolidated AT1 capital (including minority interests not included in row 5) issued by subsidiaries and held by third parties		
35	of which: instruments issued by subsidiaries subject to phase out		
36	Additional Tier 1 (AT1) capital before regulatory adjustments		
	Additional Tier 1 (AT1) capital: regulatory adjustments		
37	Direct, indirect and synthetic holdings by an institution of own AT1 instruments (negative amount)		
38	Direct, indirect and synthetic holdings of the AT1 instruments of financial sector entities where those entities have reciprocal cross holdings with the institution designed to inflate artificially the own funds of the institution (negative amount)		
39	Direct, indirect and synthetic holdings of the AT1 instruments of financial sector entities where the institution does not have a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)		
40	Direct, indirect and synthetic holdings by the institution of the AT1 instruments of financial sector entities where the institution has a significant investment in those entities (net of eligible short positions) (negative amount)		
41	Not applicable		
42	Qualifying T2 deductions that exceed the T2 items of the institution (negative amount)		
42a	Other regulatory adjustments to AT1 capital		
43	Total regulatory adjustments to Additional Tier 1 (AT1) capital		
44	Additional Tier 1 (AT1) capital		
45	Tier 1 capital (T1 = CET1 + AT1)	384,519	
	Tier 2 (T2) capital: instruments		
46	Capital instruments and the related share premium accounts		
47	Amount of qualifying items referred to in Article 484(5) CRR and the related share premium accounts subject to phase out from T2 as described in Article 486(4) CRR		
EU-47a	Amount of qualifying items referred to in Article 494a(2) CRR subject to phase out from T2		
EU-47b	Amount of qualifying items referred to in Article 494b(2) CRR subject to phase out from T2		

		(a)	(b)
		Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
48	Qualifying own funds instruments included in consolidated T2 capital (including minority interests and AT1 instruments not included in rows 5 or 34) issued by subsidiaries and held by third parties		
49	of which: instruments issued by subsidiaries subject to phase out		
50	Credit risk adjustments		
51	Tier 2 (T2) capital before regulatory adjustments		
	Tier 2 (T2) capital: regulatory adjustments		
52	Direct, indirect and synthetic holdings by an institution of own T2 instruments and subordinated loans (negative amount)		
53	Direct, indirect and synthetic holdings of the T2 instruments and subordinated loans of financial sector entities where those entities have reciprocal cross holdings with the institution designed to inflate artificially the own funds of the institution (negative amount)		
54	Direct, indirect and synthetic holdings of the T2 instruments and subordinated loans of financial sector entities where the institution does not have a significant investment in those entities (amount above 10% threshold and net of eligible short positions) (negative amount)		
54a	Not applicable		
55	Direct, indirect and synthetic holdings by the institution of the T2 instruments and subordinated loans of financial sector entities where the institution has a significant investment in those entities (net of eligible short positions) (negative amount)		
56	Not applicable		
EU-56a	Qualifying eligible liabilities deductions that exceed the eligible liabilities items of the institution (negative amount)		
EU-56b	Other regulatory adjustments to T2 capital

Disclosure of liquidity requirements

EU LIQA - Liquidity risk management

Liquidity risk management framework

bunq's liquidity risk management framework supports a moderate-risk profile and protects the bank's reputation and ability to meet payment obligations in a timely manner and at a reasonable cost, including under severely adverse conditions. The framework relies on:

- i) a granular and stable retail deposit funding base
- ii) a sizeable High-Quality Liquid Asset (HQLA) buffer mostly held as cash at the ECB,
- iii) contingent funding capacity through ECB/DNB facilities, bilateral repurchase agreements and securitisations
- iv) a comprehensive set of internal and regulatory limits monitored daily, reinforced by stress testing.

Three lines of defence

- First line of defense: Treasury executes day-to-day liquidity management (investment, funding and collateral activities) within ALCO-approved limits; Finance is in charge of regulatory and management reporting.
- Second line of defense: the Risk department (Financial Risk function, reporting to the CRO) independently identifies, measures, monitors and challenges liquidity risk, develops the stress-test assumptions and reviews the models used.
- Third line of defense: Internal Audit provides independent assurance over the design and operating effectiveness of the liquidity risk governance, processes, models and controls. The Internal Audit function reports directly to the Management Board and the Supervisory Board.

Governance and centralisation

The Asset & Liability Committee (ALCO) is an executive committee with delegated authority from the Management Board. ALCO meets monthly and is responsible for reviewing and approving the ILAAP stress scenarios, overseeing the design and implementation of liquidity risk controls, monitoring internal and prudential liquidity metrics and approving mitigating actions, owning the Contingency Funding Plan (CFP), assessing the liquidity implications of new products and approving the structure of the liquidity buffer. The CFO (with day-to-day authority delegated to the Head of Finance) is ultimately accountable for the ILAAP package and is a voting member of ALCO. The CRO and the Head of Financial Risk represent the second line in ALCO.

Liquidity management is centralised at bunq B.V.: all customer deposits and the entire liquidity buffer are held at this entity. ILAAP liquidity stress tests are run on both solo and consolidated balance sheets; the practical difference is small as both rely on the same retail customer deposits.

Funding strategy and diversification

bunq's primary and most stable funding source is granular retail and SME customer deposits, the majority of which are covered by the Dutch Deposit Guarantee Scheme (DGS). Total user deposits stood at EUR 8.43 billion at 31 December 2025, of which approximately 91% is DGS-covered and approximately 94% is retail.

Funding diversification has been deliberately broadened with the launch of term deposits in December 2025, the securitization of a further tranche of our mortgage portfolio (awaiting ECB-eligibility recognition), and the operationalization of repurchase capability with multiple counterparties.

The funding strategy explicitly excludes reliance on wholesale market funding under normal conditions; wholesale repo and securitization capacity are held in reserve as a contingent funding tool

Risk reporting and measurement

bunq monitors a comprehensive Risk Appetite Statement (RAS) covering both regulatory and internal liquidity metrics. LCR and HQLA balance are monitored daily through automated dashboards. Intraday reporting of customer inflows/outflows, monitoring of the largest customers' funding activity, and intraday non-EUR balance reporting were introduced in 2025. ALCO formally reviews the metrics at least monthly.

Internal limits include early warning levels on cash as a % of total deposits, asset encumbrance limits, and internal LCR and NSFR early-warning levels set well above the regulatory 100% minimum.

Hedging and mitigation

Liquidity risk is mitigated rather than hedged in a derivative sense. Mitigants include the size and quality of the HQLA buffer, the granularity of the deposit base and DGS coverage, and the operational readiness to monetize the buffer. The continuing effectiveness of these mitigants is reviewed in the annual ILAAP and tested through stress scenarios; collateral monetization capability is tested at least annually.

Stress testing

bunq runs idiosyncratic, market-driven and combined stress scenarios, embedding climate and environmental factors as well as guidance from supervisory expectations on liquidity stress testing.

The point of failure is defined as a breach of the ECB minimum reserve requirement (i.e. inability to repay a customer withdrawal). The survival period exceeds 12 months under all scenarios across the budget horizon.

Contingency Funding Plan (CFP)

The CFP team comprises the permanent members of ALCO. Escalation is triggered by RAS threshold breaches on the LCR, NSFR, asset encumbrance ratio or survival period, or by qualitative assessment of an emerging liquidity event. The Treasurer (1st line) and Head of Financial Risk (2nd line) continuously monitor the position. Activation of the CFP triggers immediate notification by the CRO to the Management Board, the Supervisory Board and DNB.

The CFP contains the following menu of mitigating actions, which include halting new uncommitted investments, increasing freely withdrawable savings rates and/or term deposit rates to retain and attract deposits, monetizing HQLA via Eurosystem refinancing or secondary sale and other tradable securities via bilateral repo or sale. If those measures were insufficient, bunq could source senior funding from another bank, securitize an additional portion of its loan portfolio, or request additional shareholder funding.

The CFP is reviewed and updated annually as part of the ILAAP. The ability to borrow against eligible collateral with the ECB and bilaterally is tested at least annually with sufficiently sized live transactions.

Declaration of the Management Body

The Management Board, on the basis of the 2026 ILAAP and following review and endorsement by the Supervisory Board on 24 March 2026, declares that bunq's liquidity risk management arrangements are adequate with regard to the institution's profile and strategy. The framework, processes and controls in place are appropriate to identify, measure, monitor and manage the liquidity risks to which bunq is or could be exposed, including under severe but plausible stress.

Concise liquidity risk statement

bunq's overall liquidity risk profile is assessed as moderate and well within the Risk Appetite tolerated by the Management Body. The bank operates with a liquidity buffer that materially exceeds regulatory minima, supported by a granular and predominantly DGS-covered retail deposit base. Key ratios and figures at 31 December 2025 are summarized below.

Metric (31 December 2025, consolidated)	Value	Limit / RAS reference
LCR (consolidated)	351%	Regulatory limit 100%
NSFR (consolidated)	232%	Regulatory limit 100%
Liquidity Buffer	EUR 4,704m	ECB cash net of MRR EUR 3,989m; HQLA securities EUR 387m; Solitaire I (non-HQLA but ECB-eligible) EUR 280m
HQLA composition	L1 90.9% / L2 2.6% / non-HQLA but ECB-eligible 6.5%	—
Total user deposits	EUR 8,427m	—
Retail share of deposits	~94%	—
DGS-covered share of deposits	~91%	—
Top-20 depositor concentration	2.5%	—
Non-EUR deposits / total deposits	<1.2%	—
Internal ECB cash early-warning floor	actual ~48% of deposits	L1 RAS limit 25% of total deposits
Asset encumbrance ratio	<2%	Internal L1 limit 7%; regulatory 25%
Survival period under all stress scenarios	>12 months	Internal floor 7 months

The off-balance-sheet liquidity risk profile is limited: the only material derivative exposures are pay-fixed interest rate swaps used to hedge mortgage IRRBB; committed undrawn lines arise primarily from the mortgage pipeline (subject to a 4-month drawdown convention).

Qualitative information

Concentration of funding and liquidity sources

bunq's funding base is highly granular: the largest 53 depositors (those with balances above EUR 1m) total EUR 222m, or 2.6% of total deposits, and ~91% of total deposits sit below the DGS limit. The primary source of funding is freely withdrawable retail savings; transactional accounts (~20% of deposits) are non-interest-bearing and provide bunq's most stable and cheapest funding source. Wholesale concentration is limited and dominated by crypto-related corporate balances, to which a 100% LCR outflow factor and very conservative NSFR treatment are applied.

Composition of the liquidity buffer

As at 31 December 2025, the consolidated liquidity buffer amounted to **EUR 4,704 million**, comprising:

- ECB cash net of the minimum reserve requirement: EUR 3,989m (84.8%)
- HQLA Level 1 securities (SSA bonds): EUR 248.7m
- HQLA Level 2 securities (ABS): EUR 138.8m
- Non-HQLA but ECB-eligible (Solitaire I): EUR 279.7m

Derivative exposures and potential collateral calls

Derivative exposures are limited to plain vanilla pay-fixed interest rate swaps used to hedge mortgage IRRBB. LCR and stress-test outflows for derivatives use a worst-of mark-to-market move observed over the preceding two years.

Currency mismatch

EUR represents over 98.8% of bunq's funding. Non-EUR deposits (USD and GBP being dominant) are substantially matched by short-dated assets in the same currency via short-term assets and bank deposits. Currency-specific LCRs are monitored where regulatorily required.

Disclosure of credit risk quality

EU CRA: General qualitative information about credit risk

(a) Credit Risk Profile of the Business Model

The Group's business model generates credit risk exposure primarily through the following channels:

- Loans and advances to customers – the largest source of credit risk arising from the lending subsidiary Capitalflow, which provides Corporate Real Estate (CRE), Asset Finance (AF) and Invoice Finance/Asset-Based Lending (ABL) products predominantly in Ireland. These portfolios expose the Group to borrower default risk, collateral value risk and concentration risk at the counterparty and industry level.
- Residential mortgages (Netherlands) – bunq invests in NHG-backed and conventional residential mortgages secured on Dutch primary residences. As at 31 December 2025, 92.21% of the mortgage portfolio was covered by NHG, substantially mitigating credit loss exposure.
- Investment portfolio – the Treasury function holds bonds, asset-backed securities, collateralized loan obligations (CLOs), fixed-term funds, commercial paper, fixed-income investments and capital call lending. Credit risk on these positions is driven by issuer and counterparty default risk, managed through minimum credit rating thresholds.
- Interbank and central bank exposures – cash balances held at central banks and loans and advances to banks. As at 31 December 2025, all loans and advances to banks were rated A or higher (Moody's / S&P).
- Off-balance-sheet items – undrawn commitments and direct debits that may be returned or rejected, representing a residual credit risk element.

The overall credit risk profile reflects a low-to-moderate risk appetite. The predominance of NHG-guaranteed mortgages and investment-grade treasury assets limits expected credit losses relative to total exposure.

(b) Strategies, Processes and Criteria for Credit Risk Management and Limit-Setting

The Group's credit risk management policy is designed to achieve sustainable risk-adjusted performance while maintaining credit exposures within parameters approved by the Board. The following criteria and approaches govern the definition of policy and the setting of credit risk limits:

Policy framework

Board-approved Credit Risk Policies are maintained across all Group entities. These policies are reviewed regularly to reflect changes in market conditions and the Group's portfolio

composition. The Board sets and monitors the Group's credit risk profile against an established Risk Appetite Statement (RAS), which is reviewed frequently and approved by both the Managing Board and the Supervisory Board.

Underwriting criteria

Each loan is individually reviewed and granted based on its specific risk profile. For mortgages, lending is restricted to Dutch primary residences with first or first-and-sequentially-ranking mortgage rights and a maximum legal term of 30 years. At least 95% of mortgages must have an LTV of no more than 80% or carry NHG backing, with an individual borrower cap of EUR 1.0 million. For the investment portfolio, all new fixed-income investments require a minimum credit rating of BBB- from a recognised rating agency. Exposure limits for BBB-rated bonds, commercial paper and certificates of deposit are set at EUR 50 million (maturity ≤6 months) and EUR 25 million (other maturities), while structured credit positions rated A- and above are capped at EUR 30 million per issuer.

Limit-setting and concentration controls

The credit risk function establishes, monitors and reports concentration limits across products, counterparties and portfolios. Concentration risk arising from central bank balances and placements with a limited number of financial institutions is actively monitored and assessed. The credit risk concentration model was updated during 2025 to enhance this framework. Limits are calibrated to the Group's risk appetite and are subject to Board oversight.

Internal credit grading and scoring

The Group maintains internal credit grading and scoring frameworks calibrated to each portfolio. Capitalflow employs internal rating scales for CRE (Strong / Good / Satisfactory / Watchlist / Default), ABL and AF portfolios. Stage allocation under IFRS 9 is based on quantitative PD changes, qualitative indicators and past-due backstops (30 days for Stage 2; 90 days for Stage 3). Expected Credit Loss (ECL) models incorporate three probability-weighted macroeconomic scenarios with forward-looking PD estimates derived from macroeconomic variables including GDP growth and unemployment.

Hedging and mitigation

Credit risk is mitigated through collateral (mortgage rights, NHG guarantees, asset finance collateral), investment-grade rating requirements and exposure limits rather than through credit derivatives or financial hedges. The NHG guarantee provides substantial structural protection on the Dutch mortgage portfolio.

(c) Structure and Organisation of the Credit Risk Management and Control Function

The credit risk function sits within the second line of defence and has direct responsibility for the oversight and control of credit risk across the Group. The credit risk function is responsible for:

- Formulating and maintaining credit risk policies, methodologies and risk appetite parameters;
- Establishing and monitoring credit approval and authorisation structures;
- Developing, maintaining and overseeing processes for the measurement and monitoring of expected credit losses;
- Reviewing and assessing credit risk;
- Setting, monitoring and reporting concentration limits across products, counterparties and portfolios;
- Maintaining internal credit grading and scoring frameworks; and
- Providing independent guidance and risk expertise to the Management Board in relation to credit decisions, portfolio developments and new product initiatives.

Credit risk on funds provided to customers is controlled through the application of the Group's underwriting and arrears-management functions, which operate within the policies and limits set by the credit risk function. The Board retains ultimate responsibility for setting and understanding the Group's credit risk profile, with ongoing performance monitored on a regular basis.

(d) Relationships between Credit Risk Management, Risk Control, Compliance and Internal Audit

The Group operates a Three Lines of Defence model. Within this model, credit risk management is positioned in the second line (Risk and Compliance). In the context of credit risk specifically, the credit risk function sets the policies, limits and methodologies within which first-line lending and treasury activities are conducted. The credit risk function also provides independent guidance to the Management Board on credit decisions and portfolio developments, ensuring separation between those who originate credit exposures and those who govern and control them.

Board-approved Credit Risk policies apply across the Group, with the Board responsible for setting the credit risk appetite and monitoring ongoing performance against it. This creates a direct line of accountability from the credit risk function through to Board level.

Disclosure of market risk

EU MRA: Qualitative disclosure requirements related to market risk

bunq presents its market risk exclusively within its banking book; the bank does not maintain a trading book, and the disclosures under Article 445 CRR (Simplified or Alternative Standardised Approach for trading-book positions) are therefore not applicable.

Market risk management for the banking book

Market risk in the banking book arises when movements in market variables - primarily interest rates, credit spreads, and to a lesser extent foreign exchange rates - adversely affect the bank's economic value or earnings. The banking book comprises all assets and liabilities not held for trading, intended to be held over the long term.

bunq's market risk management framework is designed to keep market risk consistent with the strategy and the Risk Appetite. **ALCO oversees market risk management** under delegated authority from the Management Board. Day-to-day execution sits with the Treasury department (1st line). The Risk department, including the Financial Risk function, provides independent measurement, monitoring and challenge (2nd line). Internal Audit provides independent assurance (3rd line).

Risk appetite for market risk is articulated through quantitative limits on the sensitivity of the Economic Value of Equity (EVE) and Net Interest Income (NII) to standardised interest-rate shocks, plus dedicated limits for FX and credit-spread sensitivities. EVE and NII are benchmarked to CET-1 using the regulatory Supervisory Outlier Test (SOT); bunq has never been an outlier on either SOT.

Hedging tools include pay-fixed interest rate swaps, used to reduce the asset-liability duration mismatch (EVE risk) driven by long-dated residential mortgages, and fixed-rate HQLA bonds to hedge NII Risk arising from stable savings deposits.

Models used to measure market risk, in particular the behavioural NMD framework, are independently validated, recalibrated semi-annually, formally reviewed annually, and approved by ALCO. Expert overlays remain subject to ALCO governance.

Market risk measurement for the banking book

Market risk in the banking book is composed of **Interest Rate Risk in the Banking Book (IRRBB)**, **Credit Spread Risk in the Banking Book (CSRBB)** and **Foreign Exchange (FX) Risk**. IRRBB is the most material sub-type given bunq's balance sheet structure (long-dated Dutch mortgages funded mainly by on-demand savings).

Interest Rate Risk in the Banking Book (IRRBB)

The primary source of IRRBB is the maturity mismatch between long-dated fixed-rate mortgage assets and on-demand customer deposit funding. Behavioural modelling, most importantly the maturity profile of non-maturing deposits and their pass-through rate (PTR), therefore drives the measurement. IRRBB is actively managed within the limit framework via micro-hedging (payer swaps) and the HQLA bond programme, with a target Duration of Equity of ~2.5 years.

Credit Spread Risk in the Banking Book (CSRBB)

CSRBB arises from potential spread movements on the bank's interest-bearing securities: SSA bonds, ABS and CLOs. bunq scopes CSRBB consistent with the EBF July 2023 paper: securities are in scope; loans and non-maturing deposits are out of scope. CSRBB is measured on both the EVE and NII metrics. The probability of CSRBB EVE losses materializing into realized losses is assessed as low, given the size and quality of bunq's liquidity buffer and the established CFP pecking order, in which securitizations and non-HQLA assets are monetized before HQLA bonds.

Foreign Exchange Risk

FX risk is managed centrally by Treasury. It primarily arises from the **Local Currencies product**, which enables users to hold balances in foreign currencies. Open currency positions are typically cleared intraday; FX risk crystallizes principally through **weekend settlement-timing accumulation**, since conversions executed over weekends cannot be cleared until markets reopen.

Economic capital

Pillar 2 economic capital for IRRBB is calculated using the worst combined EVE+NII regulatory scenario and is decomposed into Gap Risk, Option Risk, Basis Risk and Model Risk add-ons. Pillar 2 economic capital for FX risk is set at **EUR 266k for 2026** (rising to EUR 358k in 2027 and EUR 434k in 2028), and scaled with projected FX conversion volume, using the methodology described above.

EUR '000	2025 SREP	2026 base case	2027 base case	2028 base case
IRRBB Pillar 2 capital	20,290	19,905	22,778	26,726
FX Pillar 2 capital	266	266	358	434

Qualitative information on interest rate risk in the banking book

Interest rate risk is the risk of losses in EVE or NII due to unfavourable yield-curve movements. The main sources of IRRBB for bunq are:

- The maturity mismatch between fixed-rate mortgage assets and on-demand customer deposit funding.
- Client behaviour, which determines the maturity profile of non-maturing deposits and the pass-through of rate changes to customer rates. Modelling client behaviour exposes the bank to model risk.
- Embedded options on the asset side (mortgage prepayment, mortgage pipeline drawdown / "dagrente optie").

Models and assumptions are subject to independent validation, periodic back-testing and ALCO approval. Recalibration is performed semi-annually and review is annual.

Risk measurement for interest rate risk

IRRBB is measured both from an economic value perspective and an earnings perspective:

- EVE-at-Risk measures the loss in the economic value of equity under the six EBA-prescribed yield-curve shocks, on a run-off balance-sheet assumption, with floor and 5-year stable-NMD cap as per the EBA Guidelines.
- NII-at-Risk measures the difference in net interest income between a base scenario and a shocked scenario over a 1-year horizon, on a constant balance-sheet assumption. For the regulatory NII SOT and the EU IRRBB1 disclosure, the two parallel ± 200 bps shocks are used; for internal capital purposes bunq computes NII outcomes under all six SOT scenarios and identifies the worst combined EVE+NII outcome as the leading scenario for Pillar 2 IRRBB capital determination.

These metrics are complemented by stress testing and sensitivity analyses focused on the stability and PTR of non-maturing deposits. The interest rate risk position is monitored monthly by ALCO and reported regularly to the Management Board.

Interest rate risk of non-trading book activities

The table below shows the change in EVE under each of the six EBA-prescribed supervisory shock scenarios and the change in NII under the two parallel supervisory shock scenarios (± 200 bps instantaneous), as at 31 December 2025 vs. 31 December 2024. All exposures are converted to EUR and subject to the EUR shock curve, EUR being the only material currency (>99% of the balance sheet).

The Parallel Up scenario (+200 bps instantaneous) is the worst-case EVE scenario at year-end 2025; the increase in EVE sensitivity vs. year-end 2024 reflects the slight increase in Duration of Equity. The Parallel Down scenario is the worst-case NII scenario; the year-on-year change reflects the introduction of the behavioural Client Rate Model, which reduces the assumed pass-through of ECB rate cuts to depositors and therefore recognises bunq's net long exposure to short-rate cuts.

EUR million	Δ EVE 31 December 2025	Δ EVE 31 December 2024	Δ NII 31 December 2025	Δ NII 31 December 2024
Parallel Up (+200 bps)	-40.48	-23.60	+19.92	+2.91
Parallel Down (-200 bps)	+52.58	+29.54	-15.06	-7.28
Steepener	-30.92	+6.79	—	—
Flattener	+14.57	-10.08	—	—
Short Rates Up	+0.20	-17.38	—	—
Short Rates Down	-7.37	+18.02	—	—

EVE figures are calculated on a run-off basis with the regulatory post-shock interest-rate floor and a 5-year cap on the average maturity of stable retail savings, in line with EBA RTS 2022/10. NII figures are calculated on a constant balance sheet over 12 months. Both metrics remain comfortably below the regulatory SOT thresholds.

Disclosure of operational risk

EU ORA - Qualitative information on operational risk

Operational risk

bunq defines operational risk as the risk of loss resulting from inadequate or failed internal processes, people, systems, or from external events. As a fully digital bank, bunq's operational resilience depends on the secure, resilient, and continuous operation of its technology, processes, and third-party ecosystem. bunq therefore maintains an integrated operational risk management framework designed to identify, assess, monitor, mitigate, and report operational risks across the organization.

The framework is aligned with the Digital Operational Resilience Act (DORA), the Dutch Financial Supervision Act (Wft), EBA Guidelines, and related regulatory requirements.

bunq's operational risk framework is built around a unified resilience approach that connects risk management, incident management, business continuity, disaster recovery, ICT risk management, and third-party risk oversight into one governance structure.

Structure and Organization

Operational risk governance follows the three lines model:

- The first line (business and engineering teams) owns and manages operational risks in day-to-day activities.
- The second line (Ground Control, including Operational Risk, Compliance, and Security) defines frameworks, performs oversight, monitors risks, and challenges the effectiveness of controls.
- The third line (Internal Audit / System Checkers) independently assesses the effectiveness of governance, controls, and operational resilience arrangements.

The Management Board retains ultimate accountability for operational risk management, ICT risk management, and digital operational resilience.

bunq applies a risk-based approach to operational resilience through its Business Impact Analysis ("BIA") process. The BIA identifies critical and important functions, maps supporting systems and third-party dependencies, and defines Recovery Time Objectives ("RTOs") and Recovery Point Objectives ("RPOs"). Critical services such as payments, onboarding, account access, cards, fraud prevention, and customer support are prioritized within continuity and recovery planning.

Operational risks are monitored through a centralized risk governance structure which includes:

- risk assessments and control testing;
- incident and problem management;
- corrective action plans ("CAPs");

- key risk indicators and risk appetite monitoring;
- business continuity and disaster recovery testing;
- audit and regulatory findings management; and
- third-party oversight and contingency planning.

bunq maintains a unified impact assessment methodology across operational risks, incidents, remediation items, and continuity events. This enables consistent prioritization and escalation based on customer impact, downtime, financial impact, data exposure, and reputational effects.

Incident management processes are designed to ensure rapid escalation, coordinated response, and regulatory reporting where required. All incidents are managed by the Business Continuity Officer ("BCO") function through predefined escalation procedures and recovery playbooks. bunq continuously monitors systems, customer escalations, operational metrics, and cybersecurity events to identify emerging threats and disruptions at an early stage. bunq uses redundancy, automated failover mechanisms, point-in-time database recovery, and infrastructure-as-code deployment practices to support operational continuity and resilience.

bunq performs regular operational resilience, business continuity, and disaster recovery testing, including walkthroughs, tabletop exercises, simulations, and full recovery tests. These exercises simulate scenarios such as regional cloud outages, ransomware attacks, third-party failures, and infrastructure disruptions to validate recovery capabilities against defined RTO and RPO targets. Lessons learned from these exercises are translated into remediation actions and framework improvements.

Third-party risk management forms an integral part of the operational risk framework. bunq applies risk-based due diligence, onboarding, monitoring, and exit planning procedures for outsourced and ICT service providers. Critical third parties are subject to enhanced governance, periodic reviews, resilience assessments, and contingency planning requirements in line with DORA and EBA outsourcing expectations.

Policies and Strategies for Risk Mitigation

To support operational resilience, bunq maintains policies and procedures governing:

- ICT risk management;
- change management;
- cybersecurity;
- backup and recovery;
- business continuity;
- disaster recovery;

- incident management; and
- third-party risk management.

The ICT Change Management framework ensures that all technology changes are assessed, tested, approved, monitored, and recoverable through defined rollback procedures before implementation into production environments.

bunq continuously evolves its operational risk framework to address emerging threats, increasing digital dependencies, evolving regulatory expectations, and the growing importance of operational resilience within the financial sector.

Disclosure of remuneration

EU REMA - Remuneration policy

General Logic and Aim of the Policy

The policy's purpose is to attract, retain, and motivate talented employees to drive the company's long-term success. It aligns employee rewards with the bank's strategic objectives, values, and risk appetite, while ensuring fairness, transparency, and compliance with all relevant laws. The policy framework distinguishes between fixed pay, variable pay, and a Management Incentive Plan (MIP). Although MIP is not considered a form of remuneration, the policy mentions this for transparency reasons.

bunq's remuneration policy is designed to comply with the Dutch Financial Supervision Act (Wft), Capital Requirements Directive IV (CRD IV), EBA Guidelines on sound remuneration policies, the Dutch Corporate Governance Code, and the Regeling beheerst beloningsbeleid Wft 2021. The policy also takes into account CSRD and ESRS requirements.

Governance

The remuneration policy is governed by a clear structure of oversight and responsibility. The Supervisory Board (SB), advised by the Remuneration Committee (RemCo), is ultimately overseeing the policy. The SB designs and evaluates the remuneration for the Management Board (MB) and approves the policy principles for all other employees. RemCo assists by reviewing the policy annually, proposing changes, and preparing remuneration decisions for the SB to take. The Management Board (MB) is responsible for the day-to-day implementation and execution of the policy. Finally, the remuneration for the Supervisory Board members is determined by the general meeting of shareholders.

Employee Policy

bunq ensures equal remuneration for equal work or work of equal value, regardless of gender. bunq annually assesses and monitors the gender pay gap across the organisation at a global level.

Remuneration Structure: Compensation for general employees consists of a fixed salary supplemented by potential variable remuneration.

Fixed Pay: The fixed salary is determined by factors like education, experience, skills, and responsibilities. It is benchmarked by external consultants against market conditions, especially for specialized roles, to ensure competitiveness.

Variable Pay: Employees in operational teams are eligible for a monthly performance bonus. These bonuses are limited to only top performers within the operational teams.

Employees in non-operational teams may receive a profit-sharing incentive if quarterly profit targets are met.

At least 50% of any variable remuneration awarded to an employee must be based on non-financial performance criteria.

The average variable remuneration across the company is not to exceed 20% of the total fixed remuneration. Employees in control functions — including Finance, Risk, Compliance, Legal, Internal Audit, Credit Risk and Regulatory — are independent from the business activities they supervise. Their variable remuneration is based exclusively on predetermined objectives tied to their own function, not to the results of the activities they oversee, and is capped at 20% of their fixed remuneration.

Identified Staff are those employees whose professional activities have a material impact on bunq's risk profile. bunq does not apply a special variable remuneration policy for Identified Staff; the general variable remuneration framework described above applies equally to them.

Note: this variable pay was applicable until 20250802, and was abolished as of this date.

Management Board (MB) Policy

Remuneration Structure: The remuneration for the Management Board consists exclusively of a fixed component, which includes a base salary, pension contributions, and various allowances.

No Variable Pay: Members of the Management Board are not eligible for any form of variable remuneration like performance bonuses or profit-sharing.

Benchmarking: Their total compensation is benchmarked by external counsels annually against the tech, media, and gaming industries, with the goal of staying competitive against comparable roles within the relevant sectors.

Management Incentive Plan (MIP): bunq operates a share based payment incentive scheme for management and other key personnel. MB members may be given the opportunity to participate in the MIP, but this is not considered a formal part of remuneration and is not tied to performance.

Supervisory Board (SB) Policy

The remuneration for Supervisory Board members is determined and approved by the general meeting of shareholders. The Supervisory Board's primary role is oversight; it is responsible for designing, implementing, and evaluating the remuneration policy for the Management Board and for approving the remuneration principles for all other employees.

The 2025 Annual Report contains further disclosure of bunq's remuneration policy and amounts.

EU REM1 - Remuneration awarded for the financial year

bunq has no variable remuneration.
